

Some extra questions about data analysis

From : Sophie

To : You

Hello,

Here are the questions I have for you!

I really want us to work together more in the future and understand more about your work. I think if I knew more about all the steps involved in data analysis, I'd know how I could have made the whole process easier for you!

- Slide 1 - "Lifecycle"
 - What are the names of the stages of the data lifecycle?
 - What activities would you need to do before undertaking this project? Think about where the data came from.
 - What would you need to do if the data changed?
 - Which aspects of the data analysis lifecycle are you primarily involved with in this project?
 - How does this project fit into a broader data lifecycle?
- Slide 2 - "Requirements"
 - Summarize the process you used from the business requirements to a clear design for your dashboard.
 - How would you make sure this design actually met the needs of the business?
 - What other techniques could you use to make the design clearer?

Good luck!

Sophie
